

Request for Proposal: Digital Asset Management System

“The only way to do great work is to love what you do.”
— Steve Jobs, 2005

We invite qualified vendors to submit proposals for a cloud-based digital asset management (DAM) platform that supports multi-format ingestion, AI-driven tagging, and secure sharing. The solution must integrate with existing CMS, provide role-based access, and offer APIs for automation. Proposals should include pricing tiers, implementation timelines, and case studies of similar deployments.

Evaluation Criteria

1. Technical Capability

1.1 Architecture design (scalable, redundant)

1.2 Security compliance (ISO 27001, GDPR)
2. Cost Structure

2.1 Subscription fees per user/month

2.2 One-time implementation charges
3. Vendor Experience

3.1 Client portfolio in media & publishing

3.2 Support SLA and training resources

Feature	Vendor A	Vendor B	Vendor C
AI Tagging	✔	✗	✔
API Endpoints	15+	8	12
Mobile App	iOS/Android	iOS only	Android only
Customization	High	Medium	Low
Integration Partners	Adobe, SharePoint	Only Adobe	SharePoint, Google Drive

```
# Sample ingestion script (Python 3.8+)
import requests, json

API_KEY = "YOUR_API_KEY"
ENDPOINT = "https://dam.example.com/api/upload"

def upload_asset(file_path):
    with open(file_path, 'rb') as f:
        files = {'file': f}
        headers = {'Authorization': f'Bearer {API_KEY}'}
        response = requests.post(ENDPOINT, files=files,
headers=headers)
        return json.loads(response.text)

# Example usage
if __name__ == "__main__":
    result = upload_asset("image.jpg")
    print(result)
```

Footnotes

1. The DAM market is projected to grow at 12% CAGR over the next five years.^[1]
2. Integration with existing CMS requires OAuth 2.0 and SAML support.^[2]
